

Addressing
Flying-as-Default
Setting in India's IT
Companies to reduce
their
Climate Pollution

*f*air travel

BACKGROUND

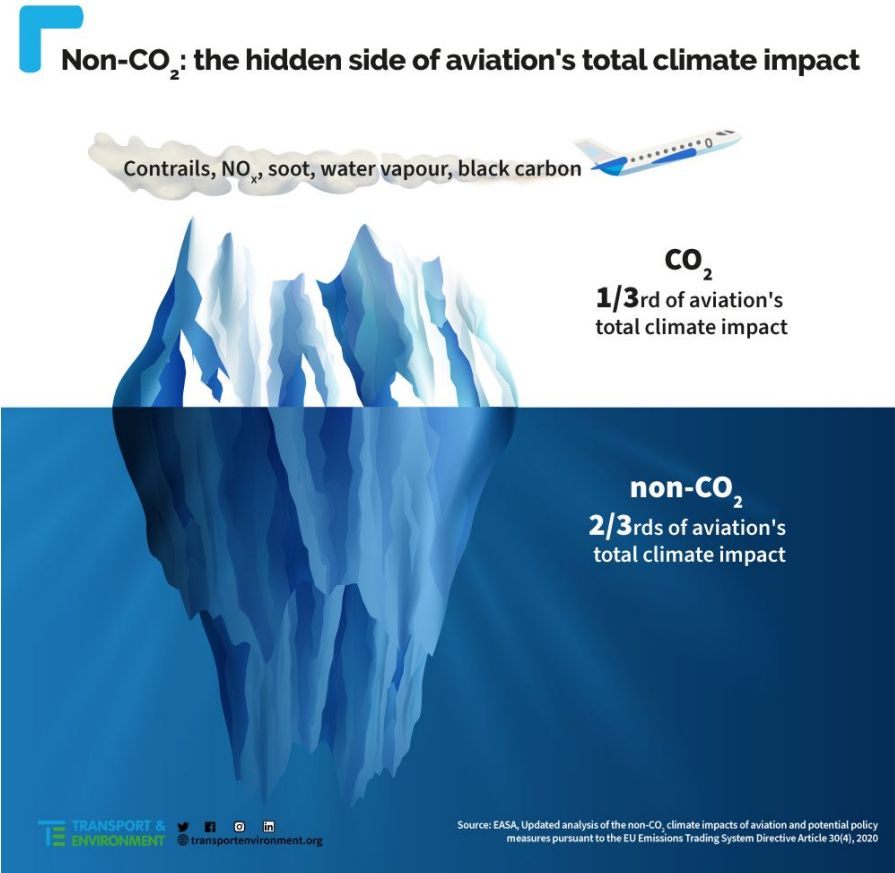

Aviation + Indian IT Companies = Climate Pollution

- Indian domestic aviation market is fastest growing on the planet: 3rd largest by 2025 vs. 7th largest in 2017
- About to reach “air-travel-as-default” lock-in for business professionals, reinforced by corporate travel policies, and buttressed by its becoming part of normative behaviour in industrial societies
- Paradoxically, air travel is an untouched subject despite widespread awareness within their sustainability team that air travel is their single largest climate pollution hotspot
- 2 largest IT Companies in India added approximately 55,000, and 74,000 tonnes of climate pollution from Air Travel in 2008
- In 10 years, 88,000 and 135,000 tonnes of CO₂e, respectively (year-on-year rise ~ 6% to 8%)
- Contrastingly, electricity emissions declined (3.8% decline per year for Infosys)

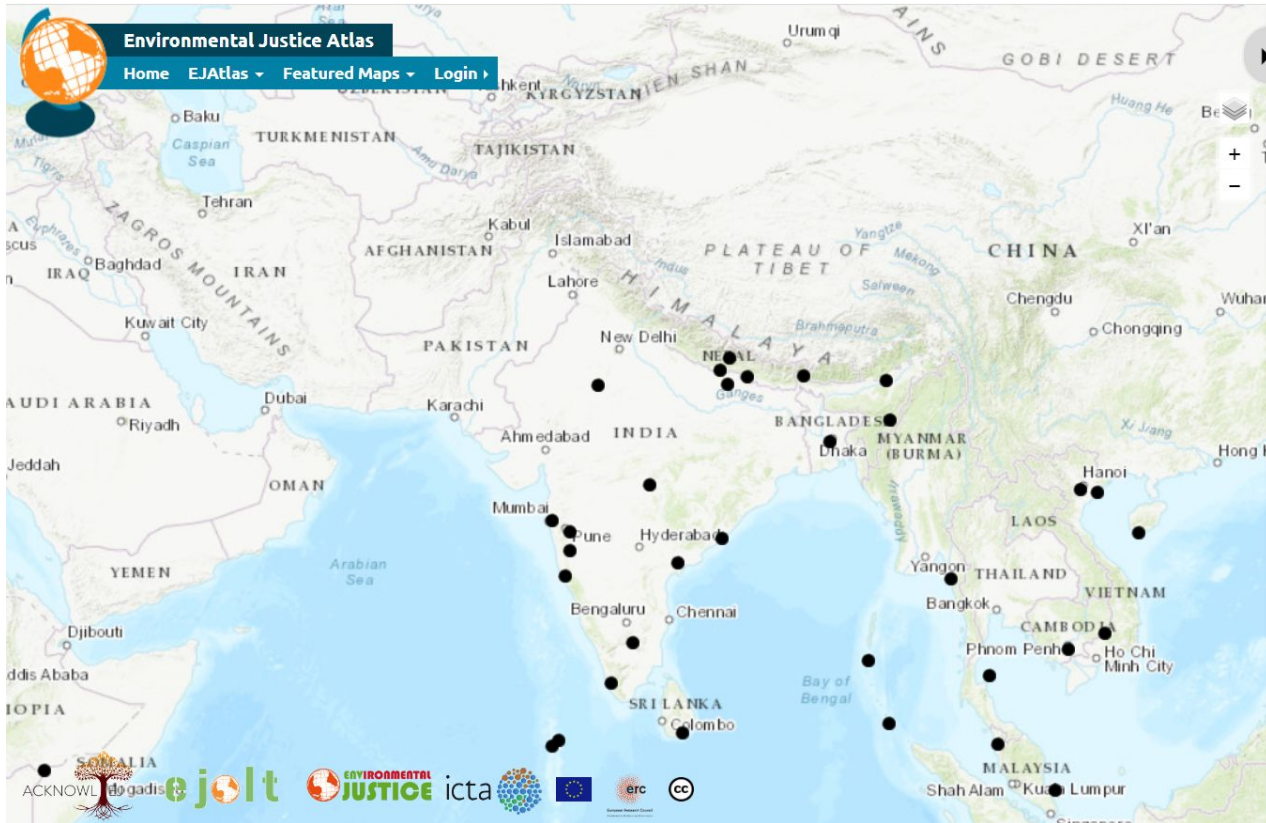

Aviation + Indian IT Companies = Climate Injustice

- Indian Aviation industry is becoming a target of significant civil society actions that are escalating in 2022; Environmental Justice Atlas reports 16 active airport-related resistance movements
- Indian IT Companies enjoy immense social sanction and legitimacy in India and carry the expectation of thought-leadership in ecological responsibility.
- An industry known for 'innovation' in India sticks to business-as-usual mode when it comes to excessive flying
- Climate emergency and Climate injustice is still interpreted as a 'future threat', not a reality that's already here

Elites do the flying, rest suffer the 'fry'ing

Aviation-related Conflicts in India

Map of Airport-Related Injustice and Resistance

Description

This online interactive map brings together case studies documenting a diversity of injustice related to airport projects across the world. It was developed in collaboration between the Environmental Justice Atlas and Stay Grounded.

ALSO ON EJATLAS

The complex block is a social media-style post for the 'Map of Airport-Related Injustice and Resistance'. It features a main title, a description paragraph, and a 'See more...' link. Below the description are sections for 'Legend', 'Cases', and 'Comments'. At the bottom, there is a section titled 'ALSO ON EJATLAS' with two thumbnail images of other cases. The first thumbnail shows a road, and the second is titled 'THE THIRD MARCHAL FIELDS ROUTE' and shows a map area.

History of missed targets by Aviation Industry

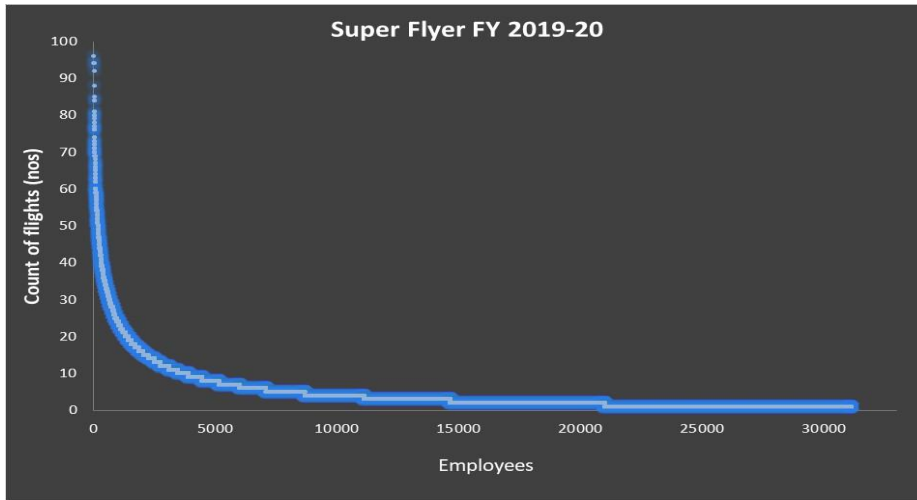

Source: Missed Targets: A brief history of aviation climate targets of the early 21st century, May 2022. Produced by Green Gumption for Possible.

PROBLEM STATEMENT

Problem Statement

- 'Green' initiatives @ Indian IT companies exist , yet air travel untouched despite awareness it is largest source of climate impact
- Senior Management fly indiscriminately; internal super-flying is rampant (500+ flight legs per year)
- Magical thinking about Sustainable Aviation Fuel, Sectorial Net-Zero 'Targets', Hydrogen/Electric Aircrafts leading to complacency
- COVID-19 was an opportunity to un-learn 'air travel as default', to break hegemonic thinking; unfortunately flying by Indian IT companies is taking off again
- IT industry's claims of championing high ethical standards are severely discredited through this conspicuous association with a conflict-ridden infrastructure industry

Problem Statement

| | Value | Units |
|-------------|-------------|----------------|
| Avg. flyer | 3.2 | tonnes CO2e/yr |
| Super flyer | 23.3 | tonnes CO2e/yr |
| Avg. flyer | 5 | Flights/yr |
| Super flyer | 46 | Flights/yr |

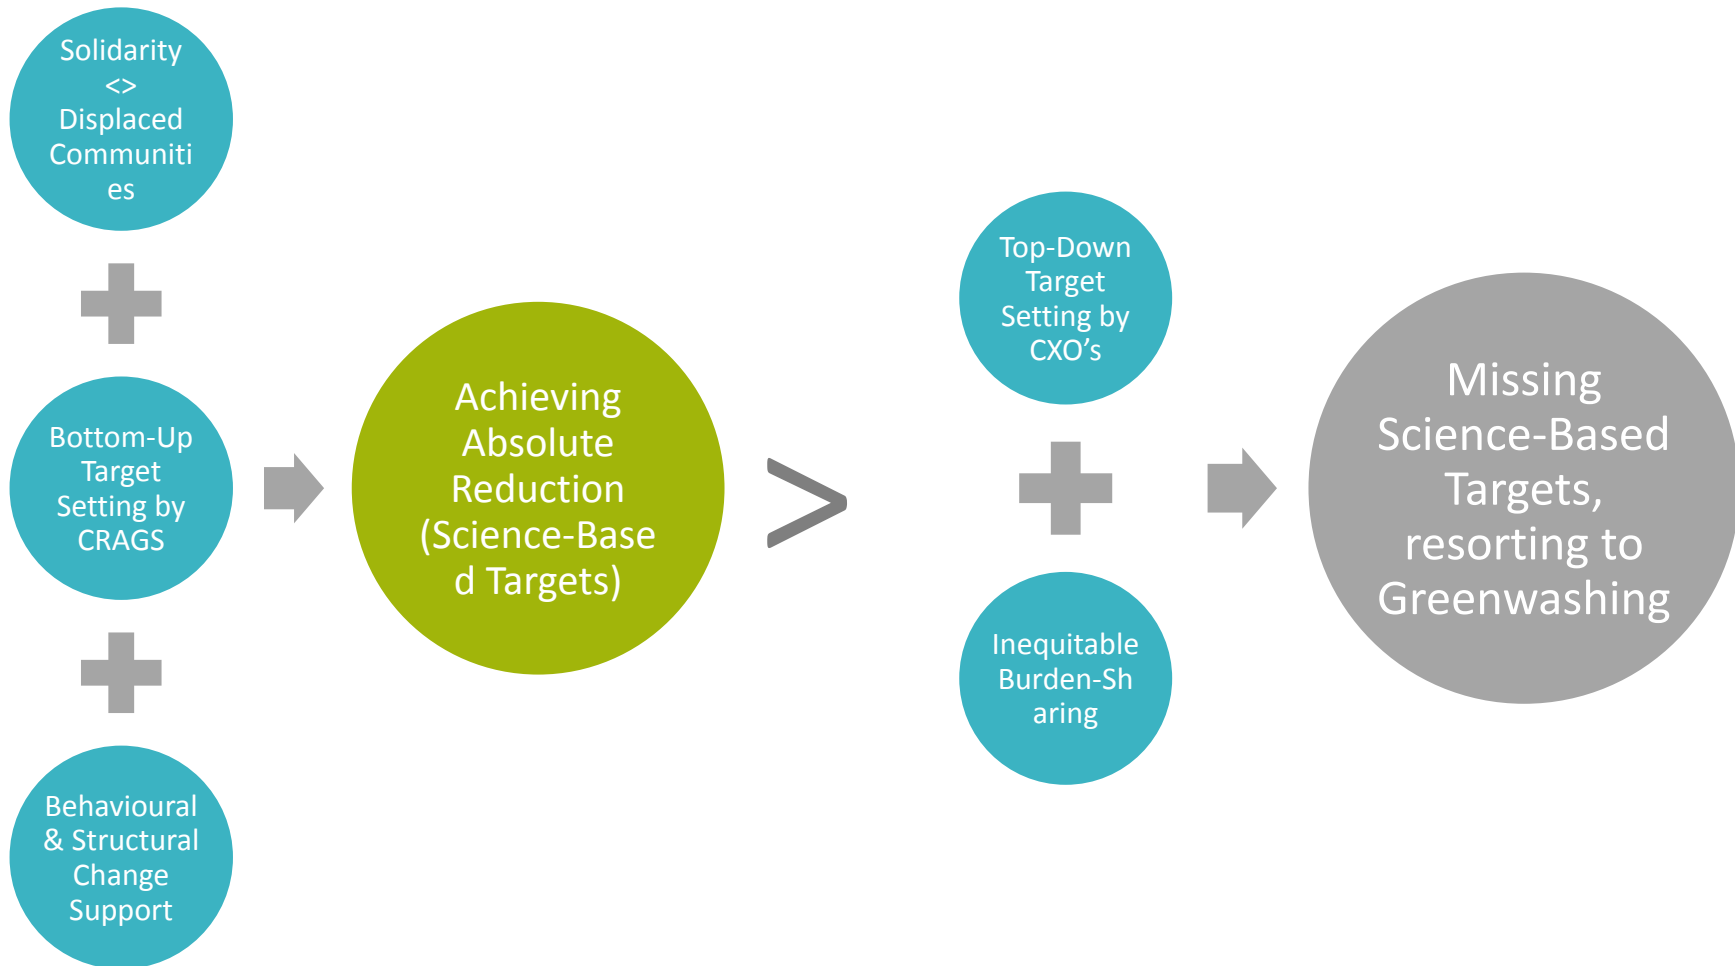

- 'IT Super Flyers' took 10 x flights vs. avg. IT flyer.
- 'IT Super Flyers' emit 7 x climate pollution vs. avg. IT flyer.
- If Indian IT 'Super Flyer' = avg. IT flyer, reduction of **19,521** tonnes CO2e.

Possibility

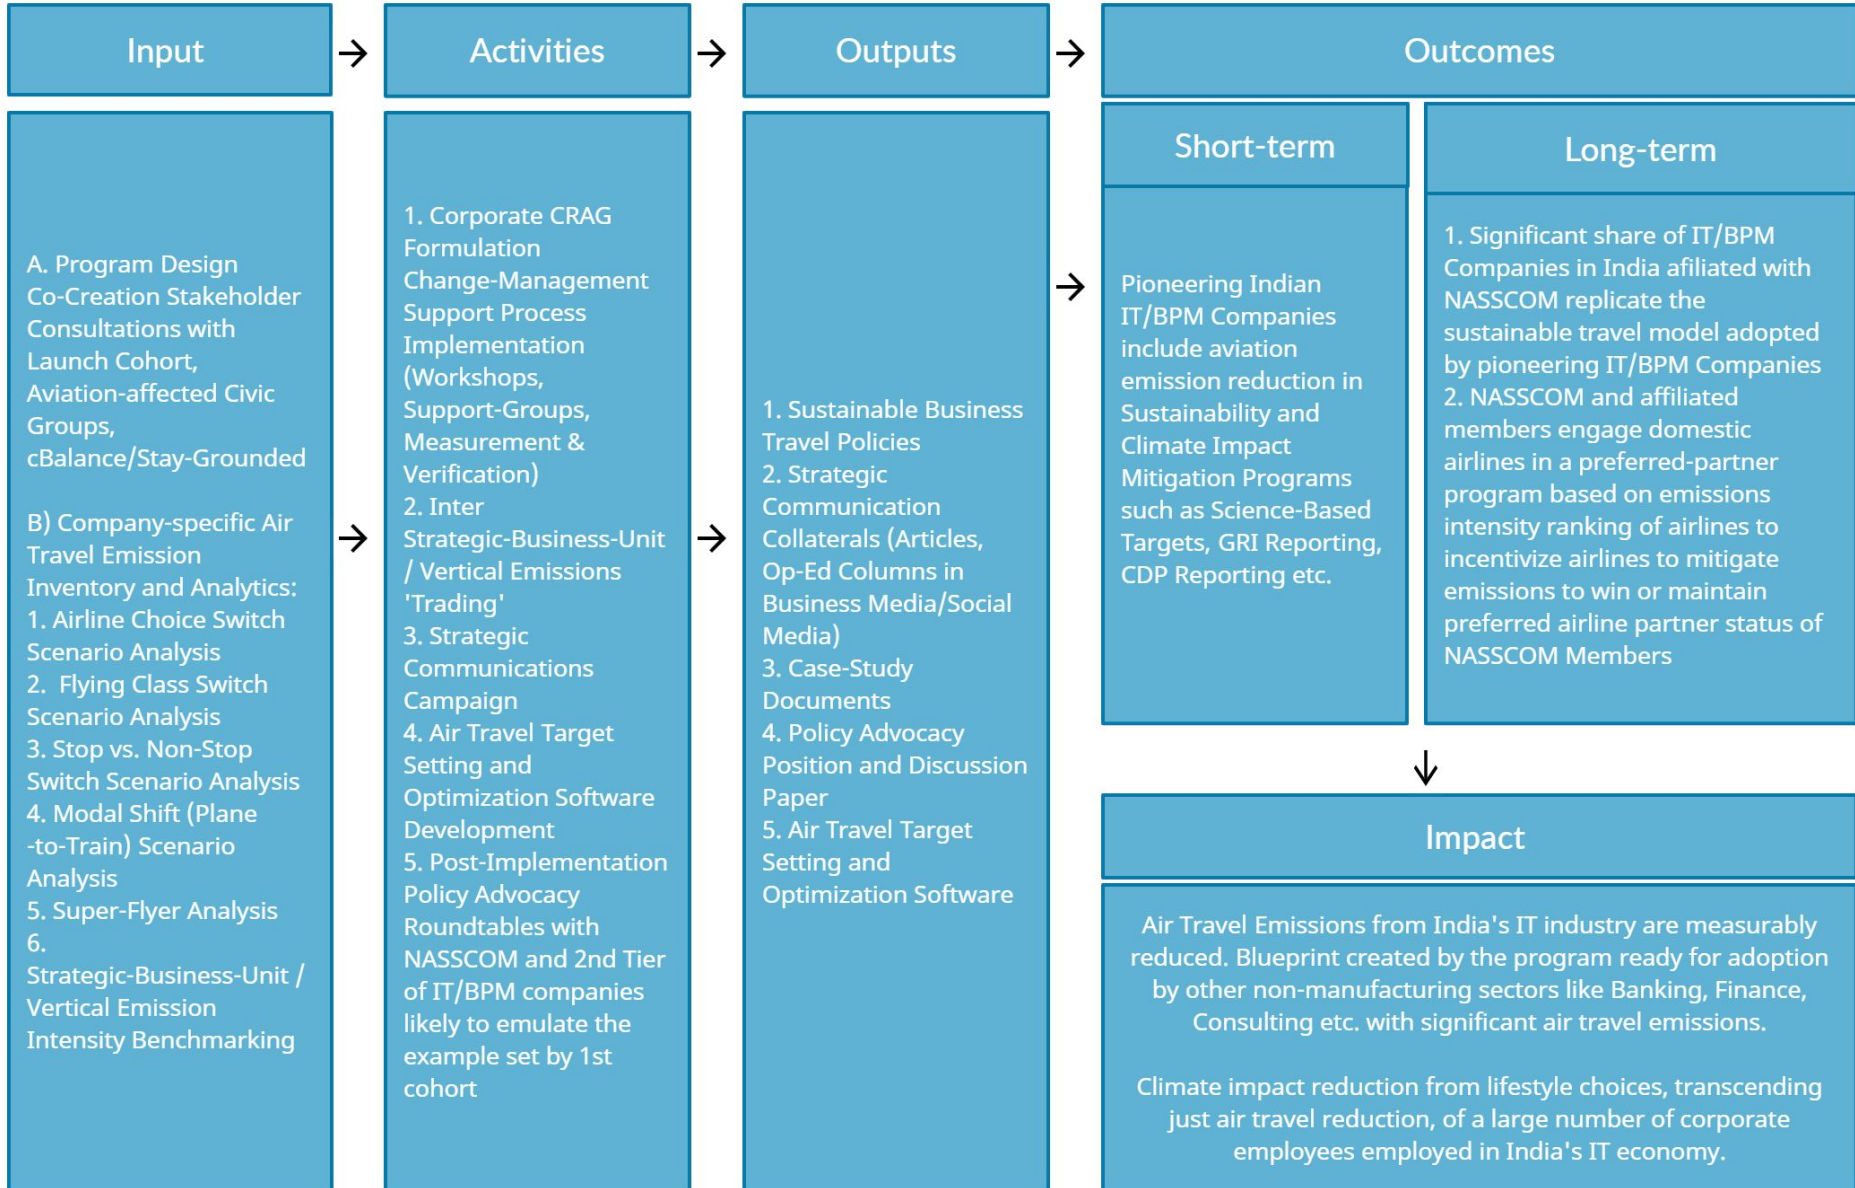

- Proof-of-Concept project at 1 Large IT Company, from 2015 to 2020, resulted in 15-20 % reduction of air travel emissions over 3 years.
- If implemented across NASSCOM's 2300+ member companies ~ 25 Million Tonnes of CO₂e per year reduction possible
- Multiplier effect: 0.8 Million Indian Middle-Class x 4 (approx.) friends-family through Carbon-Conversations Models
- 3.2 Million 'hard to reach and impossible to effect' affluents Indian Citizens dropping out of 'flying as default'

HYPOTHESIS & THEORY OF CHANGE

Hypothesis

Theory-of-Change

Workplan

CRAG sets targets based on Emissions Analytics (provisional 'policy')

Monthly Workshops to navigate challenge (structural, psychological), reflect / course-correct

Strategic Communications of 'do-ability' to mobilize peers

Establishment of formal company wide air travel reduction policy and practice guidelines

Roundtable with NASSCOM to amplify across IT economy in India

Dialogical themes for CRAG Workshops

- **hold a mirror** to excessive air travel; quantitative information necessary but not sufficient
- emphasise connection between excessive flying and growth of mega airports in the future; conduct **immersion workshops at contested sites** to shape critical social discourse
- stories of past disruptions caused by airports well established, additional work needed to **connect socio-ecological disruptions with travel mode 'choice' going forward**
- work on **disentangling two growth stories** - IT Industry growth (which IT companies defend vehemently) and aviation growth; former possible without latter; COVID restrictions have proved (revenue growth continues vs. flatlined air travel distance)
- **Addressing inexorable 'need'** to travel more important 'brake' to apply than promoting train travel (in India)
- COVID response shows that 'facts of life' can be questioned; **'non-negotiables' are negotiable**

Dialogical themes for CRAG Workshops

- Showing the **sales team reports on performance before vs. during COVID** to prove 'decoupling' of sales from flying intensity is possible
- Don't limit intellectual and ethical stimulation to air travel; **sensitise employees on all aspects of climate emergency**
- **Incentives (monetary or otherwise)** to employees for reducing flights can galvanize action
- improved **efficiency and comfort of alternative modes** of transport
- enabling account managers/ salespeople to hold **conversations with clients around reducing air travel**; finding other ways to build the relationship
- ensure **CEO and senior management leads by example** by setting flying reduction targets and achieving them

Dialogical themes for CRAG Workshops

- check if clients already value GHG mitigation; **project-based carbon budget** control can be established
- **employee activism** to influence senior management
- Internal **business-unit level 'cap and trade'** schemes

INSIGHTS (EVOLVING)

Psycho-social challenges

- **travel-ego**; people worked hard to get to upper echelons of company, do not want to be told not to travel
- **dopamine hit** from travel and perks; system built on gaining miles
- IT is booming; **image** that IT world is doing only good and are heroes – cannot possibly be harming the earth
- travelling not quest to learn about the world; **transactional** and quantified in time and money; any deviation held in suspicion
- no contagion effect for people to take up as a cause; **no role models** and not yet part of discourse
- depletion of motivation when **top management excuses itself**; equity important for employee buy-in
- air travel is ‘fact of life’ for IT employees (though COVID proved otherwise)

Systemic/structural challenges

- parochial notion of **productive use of time**
- company **insurance policies** privilege perceived safety of air travel
- continuing aspirations for **expanding market share** and global **geographical spread** of 'clients' demands air travel
- formal systems don't exist to plan **clubbing of travel**
- flying not seen as part of sustainability; linked to **bringing in business**, not source of pollution
- flying stems from **client requests** or to maintain relationship; perception of low or no 'agency' to change this
- average age of employees ~ 25 years; high **preference for travel**

Systemic/structural challenges

- desire for **teams to travel together** engenders requests for some employees to be shifted to air travel despite company policy
- **trains more expensive** than flights in some regions
- quality of other modes of transport in India; **efficiency and cleanliness**
- **exaggerated claims**/projections by airlines to achieve zero-carbon emissions targets in the future
- **magical thinking** about hydrogen aircraft and 'sustainable' aviation fuel

Co-creation at Alternate Economy Applied Research Sites

Program Status

- 7 year track record of air travel emissions reduction 'with' Wipro Ltd.
- Intimate relationships with Stay Grounded, Academia in EU working on Behavior-Change Science (Carbon Conversations)
- Pilot Program being implemented with Wipro from Jan 2022 and ongoing. Pilot Program being implemented with LTIMindtree from Jan 2024. Pilot Program to be kickstarted with Thoughtworks from June 2024.
